

Phoenix Audio Technologies to Introduce the New Stingray at UC Expo and Infocomm 2017

IRVINE, Calif., May 16, 2017 /[PRNewswire](#)/ -- Phoenix Audio Technologies will unveil its new Stingray Smart DSP Mixer system at the UC Expo in London UK (booth C-103). The Stingray is an all-in-one smart mixer utilizing Phoenix's proprietary distributed array technology. Each unit mixes up to four microphone inputs, performs echo canceling, noise canceling, AGC, and other algorithms required in a conferencing room setup. The Stingray also supports four auxiliary inputs that can be reinforced for local playback. Each unit comes with four 15 watt speaker amplifiers, SIP, USB, and analog interface, supporting any kind of conferencing device.

Phoenix also integrated its Daisy Chain technology into the Stingray. This allows 15 Stingray units to be easily connected to each other, supporting up to 60 mixed microphone inputs, and the playback of the far end through up to 60 amplified 15 watt speakers. The Daisy Chain can be broken into any number of zones using a simple interface setup. This feature makes the Stingray the perfect device for large rooms that can be partitioned. Each zone can interface independently with its own conferencing application through its built-in SIP, USB, and/or analog interface.

The chain of Stingrays can be programmed through the local network by logging into any of the units remotely using any browser. Each unit can also be programmed and controlled via a menu navigation switch and its local display panel.

"The Stingray is a one of a kind product," said Joseph Marash, Phoenix's CEO. "It's very simple to program and work with, and it addresses a huge variety of needs in its flexibility - all for a fraction of the price you would expect to pay. It is the only product with built in SIP technology, powered amplifiers, a full DSP suite, and unlimited zoning." Mr. Marash also added, "It's the perfect answer to a market that has been used to working with expensive and extremely complex solutions until now."

The Stingray will be showcased for the North American market at InfoComm2017 in Orlando this June (booth 2261), and is expected to be available for sale immediately afterwards.

About Phoenix Audio Technologies

Based in Southern California, Phoenix Audio Technologies is a leading innovator of audio communication solutions, striving to provide audio and video conferencing with simple-to-install, easy-to-use, high quality audio. The company designs and manufactures products that address the fast pace changes in communication trends, conferencing environments, and connectivity technologies. Phoenix Audio's proprietary audio algorithms aim to improve the communication experience and enable people to speak freely and naturally with as little compromise in quality as possible.
