

Auralex® Displaying Updated SonoFiber™ Materials

- SonoFiber now comes in both panels and rolls, and new color options are available -

InfoComm, Orlando, FL, June 14, 2017 - [Auralex® Acoustics, Inc.](#) (booth 6582), the world's leading brand of acoustical treatments, is now shipping newly updated versions of its popular SonoFiber™ material, a cost-effective treatment with great acoustical properties. SonoFiber is now available in both one-inch-thick panels and two-inch-thick rolls. Panels come in a package of fourteen 1" x 24" x 48" units, and the rolls measure 2" x 48" [4 feet] x 300" [25 feet]. The rolls feature a black scrim membrane on one side and available in recycled cotton. New colors for the individual panels are also available: charcoal, light gray, white and beige color options are all now offered.

SonoFiber is the perfect solution for contractors and system integrators with projects requiring a Class A fire rating without the aesthetic demands of designer treatments such as fabric-covered panels. Made from recycled cotton fibers, SonoFiber is ideal for nightclubs, restaurants, gymnasiums, houses of worship, multi-purpose rooms and other commercial or industrial environments. SonoFiber is also ideal for unfinished metal deck ceilings with common acoustical issues like echo and reverberation.
