

InFocus Transforms Collaboration with ConX Ecosystem

From cloud-based video conferencing services to broad array of software and hardware endpoints, InFocus ConX enables real-time collaboration between anyone, anytime on virtually any device.

Portland, Ore. - June 13, 2017 —InFocus unveils its transformative ConX communication and collaboration ecosystem today, centered around the new ConX Cloud video conferencing service. ConX Cloud connects with ConX display hardware solutions ranging from Mondopad touch-enabled displays and ConX video phones to scalable ConX video conferencing walls supporting up to 96 displays, as well as ConX software and web apps for laptops, iOS and Android smartphones and tablets. The ConX system also supports H.323 and SIP industry standards, allowing businesses, schools and government agencies to connect to anyone using standards-based third-party devices.

With ConX, users can connect and collaborate with more ease and more flexibility than ever before. From small team meetings to large-scale, company-wide meetings of people and ideas, the ConX universe has everything needed to connect people and information. And unlike any other solution on the market, ConX delivers the freedom and flexibility for anyone to actively participate in a virtual meeting, no matter the device or operating system in front of them. The combination of ConX Cloud and ConX devices and software from InFocus provides an unparalleled, integrated collaboration experience, while built-in support for industry standards provides the freedom to connect with people using legacy systems and other video conferencing services both inside and outside their organization

“Our intention is to propel the collaboration market to the next level of possibility and affordability. The ConX ecosystem leverages our three decades of leadership in touch-enabled display solutions and collaboration software with cloud services that allow anyone to connect on virtually any device. With ConX, InFocus provides a complete end-to-end universe of solutions meeting all of the communication and collaboration needs of businesses, schools, and public agencies,” said Mark Housley, CEO of InFocus. “Unlike every other hardware or software communication solution out there, we’re not locking you into a proprietary, limited system. We’re also not going to make our customers pay for the things that should be included like support for industry standards. Our ConX Cloud service is boundless and available at prices unmatched in the industry. We think this kind of connectivity should be available and affordable for every entity, large and small. But if your business prefers other communication services or you have legacy display equipment, that’s fine too. InFocus ConX works seamlessly with all of it.”

ConX Cloud Video Conferencing Service

The new ConX Cloud was designed and built to enable powerful, reliable video conferencing and collaboration from anywhere. Instead of presenting one-way data during a meeting, ConX Cloud provides dual-stream data and video allowing everyone to see both faces and information at the same time, providing the closest experience to an in-person meeting. With ConX endpoints from InFocus, users on the video conference can present, annotate, whiteboard, create, edit, share, save and send information in real-time. ConX Cloud supports SIP, H.323, and Skype for Business interoperability, so you can bring people and data together through a wide variety of endpoints and services on both InFocus and legacy third-party devices. Connectivity across communication platforms is essential and ConX Cloud delivers it at no extra cost.

ConX Cloud service includes support for InFocus Mondopad and a range of InFocus ConX endpoints including ConX Wall, ConX Exec, and ConX Phone, as well as audio (PSTN) dial-in, ConX mobile apps for iOS and Android, ConX apps for Windows and Mac OS, and ConX web apps. ConX Cloud also supports InFocus’ BrightCam technology for intelligent HD video enhancement, adaptively improving video conferencing image color and detail in a variety of ambient light conditions on selected InFocus devices.

ConX Ecosystem Hardware

ConX hardware endpoints integrate advanced video and information-sharing technologies into fully configurable and scalable solutions for conference rooms, huddle rooms, and video walls.

- **Mondopad**

One of the most versatile pieces of the ConX ecosystem is the award-winning InFocus Mondopad. This all-in-one touch-enabled system allows teams to connect and share any type of content with anyone in the room, as well as with attendees who are remote. Mondopad now supports the new ConX Whiteboard, enabling professionals in multiple locations to interact and share ideas on a Mondopad whiteboard, while simultaneously using ConX Cloud. Everyone can see the same whiteboard screen, and each participant can draw, write or insert text or images.

Offering the capabilities typically provided by multiple devices in traditional conference rooms, Mondopad is an enormous touch-enabled screen that combines an HD video conferencing system, an interactive

whiteboard, a 1080p or 4K screen, audio conferencing, and a powerful PC. Users can control the system, present, annotate, and whiteboard using their fingers and an intuitive, easy to use graphical user interface. Documents can be saved to the Mondopad for future access, stored to the network, or emailed to anyone directly from the device. A built-in high-quality camera and speakers facilitate enterprise-grade video conferencing, making Mondopad the standalone collaboration system that connects people, devices and information easily, seamlessly and reliably right out of the box. Mondopad is available in 57-inch and 65-inch sizes and Mondopad Ultra, with 4K resolution and an even more robust PC, is available in 70-inch and 85-inch sizes.

- **ConX Wall and ConX Exec**

For collaboration and conferencing with even more screen real estate, InFocus offers ConX Exec and ConX Wall. Both are video conferencing solutions that feature multi-screen configurations that can scale from two displays to 96 showing both shared data and video conferencing participants. ConX Wall and ConX Exec are ideal for those applications in which seeing the big picture means seeing a big picture. Using multiple ultra-narrow-bezel HD displays, users can customize these ConX solutions for any wall size ranging from that in an executive suite to the largest venue.

What sets ConX Wall and ConX Exec apart from a basic video wall is an integrated video conferencing multipoint control unit (MCU) server. The server enables users to instantly configure and change each input image to any number of the displays, allowing in-room participants to focus on whatever content they want at any given time, such as a data or video stream from a remote participant. This unique ability to create a user-defined layout and to have control from all kinds of devices makes ConX Wall and ConX Exec ideal for enterprise management, public services, education and training.

ConX Exec is available in pre-configured display, hardware and software solutions available in 2x2 or 3x2 configuration with 48.5-inch HD screens. ConX Wall is a fully-configurable solution that can be matched with third-party displays, accommodating up to 96 screens for enormous collaboration walls.

- **ConX Phone**

The ConX Phone from InFocus is a powerful desktop videophone with a 10.1-inch color HD screen, a 720p camera, and an immediately familiar user interface. The built-in wide-band speaker and high-dynamic-range microphone ensure clear hands-free conversations, or use your headset. Making an audio or video call with the ConX Phone is as easy as using a standard phone and you can import your existing contact lists and manage features from the web. ConX Phone users not only see and hear remote participants on any supported ConX device, but can also see shared presentations and whiteboards on the integrated screen.

ConX Software and Web Apps

In addition to the range of ConX hardware endpoints from InFocus, users can also participate in ConX video conferencing and collaboration from their own PCs, laptops, smartphones and tablets using ConX apps. These apps support both iOS and Android mobile devices. In addition, there are ConX apps for both Windows and Mac OS computers. There is also a ConX web app that works with browsers that support WebRTC, such as Google Chrome and Firefox. With universal support and compatibility for virtually every platform, the ConX system offers more ways to connect and collaborate than any other solution on the market.

ConX Cloud Pricing

ConX Cloud is both powerful and affordable, designed to make the power of collaboration available to more people and more institutions than ever before. It is the only service that is available at a single price without hidden fees. Support for standards and Skype for Business is built-in and included at no additional charge. The goal is maximum connectivity and flexibility, assuring the system is compatible with important standard protocols and future-proof for any changes that an enterprise may undertake in the future. ConX Cloud's game changing price makes it possible for businesses, agencies, and schools to provide every office and employee with their own video conferencing and collaboration system.

ConX Pricing	3-seat room	10-seat room	50-seat room	10 50-seat rooms	100 50-seat rooms
Promotions	Free 1-yr trial	\$4.99 promotional price (valid for 1 year with contract)

Total Annual					

Cost	\$99.00	\$119.00	\$899.00	\$7,099.00
------	---------	----------	----------	------------

“InFocus ConX is the ultimate way for people to connect,” continued Housley. “With ConX Cloud, people can video conference and collaborate in boardrooms, in huddle rooms, at their desk and on-the-go more powerfully, easily, and more affordably than ever before. Combining the aggressively priced ConX Cloud service with our uniquely expansive and complete range of ConX hardware and software solutions, people can see each other and collaborate easily, reliably and more effectively than ever before.”

ConX Cloud, ConX Wall, ConX Exec, Mondopad and all other ConX hardware and software solutions are available now. To learn more, visit: www.infocus.com/conx. To get a free ConX Cloud trial, go to www.infocus.com/conx-cloud.
