

## **Revolution Acoustics Announces Ubiqui-T™ Invisible Ceiling Tile Speakers Adaptor Panels**

**Public Address, Paging, Sound Masking and Music. Invisibly Immersively Everywhere.**

**Montreal, Canada** – June 12, 2017 - Revolution Acoustics is launching its innovative invisible ceiling tile speaker adaptor system: **Ubiqui-T™** at Infocomm 2017. Let's face it, suspended ceiling tiles are in conference rooms to classrooms. They are ubiquitous and Ubiqui-T™ provides a passport for all integrators to introduce a vastly better acoustic user experience for paging, PA, sound masking and music, all bundled into one economical system.

Ubiqui-T™ turns an existing ceiling tile when coupled with Revolution Acoustics SSP6 Multiducer transducers. It turns the tile into a high fidelity speaker able to incredibly fill a 35 foot x 35 foot room with a **single speaker** and render a more immersive listening experience than a room full of conventional cone speakers. Planar acoustic waves provide constant sound pressure levels and perfect frequency response everywhere in the room, and installs in as little as 2 minutes. Simple and simply amazing.

Come hear the "Revolution" at **Infocomm** at **Booth 6581**. Listening is believing.
