

## **beyerdynamic, inc. Presents a New Meeting Solution: the Quinta TB Wireless Boundary Microphone**

*Orlando, FL* - June 8, 2017 -- beyerdynamic, inc. introduces its Quinta TB Wireless Boundary Microphone at InfoComm 2017 June 14-16 in Orlando, FL Audio Pavilion, Booth 5775. The Quinta TB wireless boundary microphones from the beyerdynamic Quinta product line optimize the often undervalued role of voice transmission during video conferences. Flexibility, effectivity and cost optimization are the primary factors when deciding to purchase video conference systems or microphones for meeting rooms.

Different operating modes can be set using the system software. In microphone mode, the Quinta CU acts as a multi-channel receiver, in which case a maximum of four Quinta TB's (depending on the size of the room and the number of participants) can be operated simultaneously. In this mode, the software can be used to connect several central control units. In the conference mode, the Quinta TB acts as a delegate microphone unit and can be used for any traditional conference applications.

Tried-and-tested Quinta Triple Band technology ensures uninterrupted transmission. The system operates with the highest HD audio quality and 128 bit encryption and a 24-bit PIN code guarantee protection against eavesdropping. The system is distinguished by its speedy recharging time and a long operating time of at least 14 hours. A three-color backlit button with tactile feedback and Braille makes the device accessible, shows all participants the status of the microphone and enables use of the global mute, push-to-talk and push-to-mute modes.

The microphones can be operated with the fully equipped Quinta CU or the new Quinta RS control unit, which has been optimized for small meetings and video conferences at an attractive price-performance ratio.

Alan Feckanin, Director Americas, further states his excitement around this new product. "The Qunita TB is is a great addition to the Qunita conference room microphone product line. Its adaptability sets it apart in the market, combined with the quality that all beyerdynamic products encompass."
