

ClearOne Adds New Single-Channel Audio-Video Encoder To its Family of Network Media Streaming Solutions

VIEW® Pro E110 Provides Features of Dual-Channel Device for Single-Input Application

SALT LAKE CITY, May 31, 2016 /PRNewswire/ -- ClearOne's [NASDAQ: CLRO] new flexible and single-channel-priced VIEW® Pro E110 Encoder — designed for single-media input settings — is the latest addition to its industry-leading family of VIEW Pro multimedia streaming components.

"ClearOne's new VIEW Pro E110 Encoder is a single-channel alternative to our popular dual-channel VIEW Pro E120 Encoder," ClearOne Sales Director, Network Video & Audio Streaming, North & Central America, Lewis Eig said. "The VIEW Pro E110 provides a lower-cost encoder for customers who have asked us to offer a single-channel option."

ClearOne's E110 Encoder delivers high-quality video with configurable 4:4:4 and 4:2:0 color sampling; standards-based streaming formats; 1080p60, H.264-based, high-profile encoding with lossless compression; very low end-to-end latency; and full HDCP support.

ClearOne's VIEW platform stands apart from the competition. It comprises a complete AV distribution solution — featuring AV encoders, decoders, amplifiers, and Ethernet switches — that can scale to any project size, from light commercial to most complex and largest venues. "It's scalable while providing complete flexibility," Eig explained. "By pushing our technology to the edge of the network, we've eliminated the need for costly hardware matrix switching. Proprietary cabling has limitations, so we have eliminated the cabling too."

ClearOne's VIEW Pro E110 Encoder is configurable with ClearOne's new VIEW CONSOLE software. "It is an ideal match for AV environments ranging from corporate communications and hospitality and entertainment to education, healthcare, houses of worship, digital signage, and more," Eig said.

He noted that the encoder is supported by ClearOne's PANORAMA™ video composition software license and audio mixing software license, i.e., it enables the combination of multiple audio sources. It also offers source-selection and control software for Windows®, Mac, Android™, and iOS devices.
