

## Peerless-AV® Announces the Global Launch of SEAMLESS Connect Universal

AURORA, Ill., May 20, 2025 /PRNewswire/ -- Global AV technology pioneer Peerless-AV® introduces its innovative, next-level evolved SEAMLESS Connect Universal range. At its heart is the SEAMLESS Connect Universal dvLED Mounting System, engineered with an entirely new specification to address evolving customer parameters and further extend dvLED integration boundaries. The system is compatible with most latching dvLED cabinets and can scale to any size or configuration, including large-scale and inside/outside corner-wrapping displays, without limits. A minimal 40mm depth makes it the slimmest on the market, delivering the most discreet wall profile available and making it ideal for ADA-compliant deployments.

1.6" (40mm) of Z-Axis (depth) adjustment enables integrators to overcome wall irregularities for a precise fit over a bigger surface area with a new gear mechanism that offers greater control of in/out adjustments. The wall plate also includes 13mm height adjustment for quick spacing corrections.

The strength and total load capacity of the mount structure have dramatically increased. The unique quick-connect clamp is now made of cast aluminum, bolstering the clamping force and increasing load capacity. The clamp's new built-in, lock/unlock lever offers intuitive, secure latching, and an extended tab provides a self-locating aspect to assist when hanging the display. A jacking screw allows fine micro-adjustment up to 6mm for cabinet-to-cabinet alignment.

The patent-pending universal spacer provides horizontal extrusion spacing based on preconfigured display size options. The spacer's weight has been reduced by 40% and a built-in level assures that the spacer is held straight and that the spacing is precise. In addition, the spacer can be used as a caliper for non-standard display sizes.

Additional enhancements include an integrated expandable joiner, eliminating on-site cutting for most installations. Further joiners come pre-fixed to the extrusion for a tighter grip from the front. A new Z-axis/depth adjustment target tool supports a more hands-free experience.

For application scenarios where mounting directly to a wall is not feasible, the SEAMLESS Connect Universal range now includes new substructure categories - floor-to-wall, floor-to-ceiling, bolt down, mobile cart and freestanding – to safely support the total load of a dvLED video wall or all-in-one display.
