

## Huddle everywhere with Huddle Hub One, the next-gen collaboration tool

*Campogalliano, Italy / Reno, NV – June 12, 2017* –HRT, the startup that is creating new solutions for collaboration and video communication by leveraging the participants' devices, will exhibit at InfoComm 2017 in booth 2787.

Collaborative meetings of small groups are more frequent in companies of every size. Typically, everyone participates with his/her own device to take notes and share documents within the group itself or with remote participants. Due to their diffusion, these types of meetings cannot always use AV dedicated rooms, and they more often occur in a wide range of contexts that are not AV equipped.

**Huddle Hub™ One** leverages the individual devices and creates a radically new scenario. With Huddle Hub One you can collaborate and communicate using only the embedded screen and camera of laptops, tablets and smartphones: there is no need for displays on the wall, no need for webcams, no need for AV equipped and dedicated spaces. All the needed AV equipment is in your hands, your mobile device.

By **joining multiple devices to a single videoconference connection** Huddle Hub One is the all-in-one solution for video collaboration that offers a unique effectiveness, a real eye-to-eye contact: you are looking at your device, not the wall.

Presenting in a legacy room can still be a challenge and even more challenging when in an open space **Device to device presentation** is the only way to ensure everyone is on the same page. No matter where you are, when connected to Huddle Hub One you can present the screen of any device directly to the screen of all the others. Huddle Hub One connects your wireless mobile devices and turns them into a workgroup presentation system.

With Huddle Hub One you are no longer required to sit in a specified field of view, you can now comfortably sit anywhere in the room and turn any table into a collaboration space. If you already invested in that USB PTZ and Display connect them to Huddle Hub One to enhance the fixed room experience.
